Creatica | Maker x Education

Children always have a creative mind. In the Creatiaca Section, parents and their children will experience the fun of doing activities that require more manipulative ability than before, such as drawing a tangible ring with 3D printing pens, making a balloon that follows your track. You can always meet creativity team from international schools of different ages, which allows you to see what interesting projects young makers have made. Just a reminder, there will be lectures presented by four famous young geniuses.
